

Intersect OS

Developer Specification & Launch Document

Purpose of this document

This document is the single source of truth for developers to **build, deploy, and launch Intersect OS**. It translates Intersect's business model, UX vision, and platform logic into **clear functional, technical, and delivery requirements**.

This is **not a pitch deck** and **not a BRD**. It is an **execution document**.

1. Product Definition (What You Are Building)

1.1 Product Name

Intersect OS

1.2 Product Description

Intersect OS is a **full-scale Business Operating System (BOS)** that delivers **Market Entry, Venture Execution, and Shared Services as a Service (SSaaS)**.

The platform serves **two primary customer segments**:

1. **International startups & companies** entering Saudi Arabia (Soft Landing, Localization, JV, Scale-up)
2. **Saudi & regional companies** outsourcing execution through **Shared Services as a Service**

Intersect OS combines:

- **Algorithmic, self-serve business workflows**
- **On-demand shared services teams**
- **Advisory, deal-making, and venture structuring**

The platform is designed to operate as the **core operating layer for Intersect's consulting, venture builder, and shared services businesses**.

1.3 Core Value Proposition

"Build, launch, and scale companies through one operating system."

2. Target Users & Roles

2.1 User Segments

Segment	Description
International Client	Entering Saudi Arabia or MEA
Local Company	Saudi / regional company using shared services
Startup / Scale-up	Venture building & growth support

2.2 User Roles

Role	Description
Client Admin	Owns company account & approvals
Client User	Team member requesting services
Shared Services Lead	Executes operational services
Intersect Advisor	Strategy, deals, JV, GR
Intersect Admin	Platform & business control

—|—|

Client Admin	Main client account owner
Client User	Team member under same company
Intersect Advisor	Human experts responding to requests
Intersect Admin	Platform + business admin

3. Core User Journey (Must Be Implemented Exactly)

3.1 Entry Flow

1. User lands on Intersect OS marketing page
2. Clicks **Start Free Soft Landing**
3. Account + company profile created
4. User redirected to **Client Dashboard**

3.2 Dashboard Flow

Dashboard shows:

- Overall **Market Entry Progress** (step-based)
- Current completion percentage
- Notifications
- Quick actions

Progress stages:

1. Registration
2. Compliance
3. Deal Origination
4. JV / Scale-Up

Progress must be **data-driven**, not hardcoded.

4. Functional Modules (Full-Scale Scope)

4.1 Authentication & Account Management

- Email/password login
- Company-level account
- Multiple users per company
- Role-based access control

4.2 Company Profile Module

Stores:

- Legal entity name (local / foreign)
- Country of origin
- Sector
- Target activities in Saudi
- Status flags (licensed / pending / blocked)

This data feeds **all other modules**.

4.3 Market Entry Engine (Core Logic)

This is the **brain** of Intersect OS.

Responsibilities:

- Determine required steps based on company profile
- Lock/unlock tools dynamically
- Update progress percentage

Example logic:

- Tech company → MISA license required
- Industrial company → land allocation path unlocked

This must be **rules-based**, configurable by admin.

4.4 Service Marketplace & Shared Services as a Service (SSaaS)

This module is the **commercial engine** of Intersect OS.

4.4.1 Service Categories

Services must be structured into:

- **Automated Tools** (software-delivered)
- **Shared Services** (execution teams)
- **Advisory & Strategic Services** (experts, deal teams)

4.4.2 Shared Services as a Service (Core Requirement)

Clients (international or local) must be able to **request shared services directly from the platform**, including:

- Finance & Accounting
- Legal & Corporate Secretarial
- HR & Talent Operations
- Government Relations (GR)
- Procurement & Vendor Management
- Business Development (BDaaS)
- Marketing & Growth

Each shared service request must include:

- Scope selector (standardized service catalog)
- Duration (one-off / monthly / retainer)
- SLA level
- Approval workflow

Execution Flow:

1. Client submits shared service request
2. Request routed to Shared Services Lead
3. Status tracked (Requested → Active → Delivered → Closed)
4. Outputs stored in Documents module

This applies equally to **local companies** and **soft-landing clients**.

4.4.3 Advisory & Deal Services

High-level services such as:

- JV structuring
- Equity & capitalization
- Government deal origination
- Industrial land allocation

Triggered via platform and assigned to advisors.

4.5 Documents & Data Room

- Secure file storage per company
 - Auto-generated folders (Licensing, Legal, Reports)
 - Upload / download
 - Version history (basic)
-

4.6 Notifications

- In-app notifications
- Triggered by:
 - Status changes
 - Advisor responses
 - Required user actions

Email notifications optional in Phase 1.

5. Admin Panel (Mandatory)

Intersect Admin must be able to:

- Manage services (add/edit/disable)
- Configure Market Entry rules
- View all companies & statuses
- Assign advisors to requests
- Override progress manually (edge cases)

Admin UI can be basic but functional.

6. Non-Functional Requirements

6.1 Security

- Role-based access
- Company data isolation
- Secure file storage

6.2 Performance

- Dashboard load < 2s
- Service actions < 1s (excluding async jobs)

6.3 Scalability

- Support hundreds of companies
- Modular codebase

7. Technical Stack (Locked)

Developers must use:

Frontend

- React + TypeScript
- Vite
- Tailwind CSS

Backend

- Node.js (API-based)
- REST APIs
- Auth middleware

Deployment

- Vercel (frontend)
- API routes (serverless acceptable)

8. Data Model (High-Level)

Core entities:

- User
- Company
- Service
- ServiceRequest
- Document
- ProgressStage

Relationships:

- Company → Users (1:N)
- Company → ServiceRequests (1:N)
- Company → Documents (1:N)

9. Delivery Scope

Full-Scale Platform (Required)

The platform must launch as a **production-grade system**, not an MVP.

Required at launch:

- Multi-segment support (international + local)
- Shared Services as a Service (SSaaS)
- Advisory & deal execution
- Admin-controlled business logic
- Scalable data models

Explicitly Out of Scope

- Government API deep integrations (can be mocked)
- Automated payments (manual invoicing acceptable initially)

10. Launch Definition (What “Done” Means)

Intersect OS is considered **launched** when:

- A new company can onboard without developer help
- Progress updates dynamically
- Advisory requests reach advisors
- Admin can control rules & services

11. Ownership & Decision Authority

- Product Owner: Intersect Holding
- Final business logic approval: Intersect
- No feature scope changes without written approval

12. Final Instruction to Developers

Do not improvise the business logic.

If something is unclear:

- Ask before implementing
- Default to configurability via admin

Intersect OS is a **business engine**, not just software.

13. Shared Services Catalog (Execution-Ready)

Each service must be requestable by any client (international or local) through the platform.

13.1 Core Shared Services

Category	Service	Delivery Model	SLA	Output
Finance	Bookkeeping & Reporting	Monthly	5 business days	Financial reports
Finance	CFO as a Service	Retainer	On-demand	Strategic finance guidance
Legal	Corporate Secretarial	Monthly	3 business days	Resolutions, filings
Legal	Contract Drafting	Request-based	5 business days	Legal documents
HR	Payroll & GOSI	Monthly	Monthly cycle	Payroll reports
HR	Talent Sourcing	Project-based	30 days	Shortlisted candidates
GR	Government Relations	Retainer	On-demand	Meeting outcomes
BD	BDaaS	Retainer	Monthly	Leads, deals
Marketing	Growth & PR	Project/Retainer	Defined per scope	Campaign outputs

Each service request must capture:

- Scope
- Duration
- SLA
- Assigned execution lead
- Status

14. System Architecture (Conceptual)

14.1 Logical Layers

1. **Presentation Layer**
 - React + Tailwind UI
 - Client Dashboard
 - Admin Dashboard
2. **Application Layer**
 - Market Entry Engine
 - Shared Services Engine
 - Advisory & Deal Engine
 - Notification Engine
3. **Business Control Layer**
 - Rules configuration
 - Service catalog management
 - SLA & workflow management
4. **Data Layer**
 - Users
 - Companies
 - Services
 - Requests
 - Documents
 - Progress & KPIs
5. **Human Execution Layer**
 - Shared services teams
 - Advisors
 - Deal teams

15. API & Module Breakdown (High Level)

Core APIs

- Auth API
- Company API
- Service Catalog API
- Service Request API
- Document API
- Progress API
- Admin Config API

All APIs must be role-aware and company-isolated.

16. 90-Day Delivery Plan (Mandatory)

Phase 1 (Weeks 1–4): Foundation

- Auth & roles
- Company profiles
- Admin panel (basic)
- Service catalog

Phase 2 (Weeks 5–8): Execution Engines

- Market Entry Engine
- Shared Services workflows
- Advisory request flow
- Document management

Phase 3 (Weeks 9–12): Scale & Hardening

- Notifications
- SLA tracking
- Admin rule overrides
- QA, security, deployment

17. Acceptance Criteria (Go-Live)

Platform is approved for launch when:

- International client can soft-land without manual intervention
- Local company can request shared services end-to-end
- Intersect teams can execute services via platform
- Admin controls business logic without code changes
- System supports concurrent multi-company usage

18. Commercial & Strategic Note (For Developers)

This platform directly drives Intersect revenue.

Incorrect implementation = revenue leakage.

Precision matters.
