

Weekly Report

- **Title:** Fortnightly Training Report
- **Student Name:** Reem Fahad Alharthi
- **Student ID:** 445002604
- **Program:** Bachelor of Computer Science
- **Week:** First week Following the Eid Al-Adha Break
- **Dates:** 31 May to 4 Jun 2026
- **Organization/Company Name:** Wadi Makkah Technology Company
- **Supervisor Name:** Mr. Khalid Abdulghani
- **Submission Date:** 5 Jun 2026

1. Introduction

During this phase of the development process, multiple enhancements and corrective actions were carried out to address identified system issues, improve functionality, and enhance the overall user experience. The work focused on strengthening database integration, improving access control mechanisms, and ensuring that system modules operate efficiently and dynamically.

2. Tasks and Responsibilities

Intersect OS Project – Soft Landing Platform

- **User Permissions Management Enhancement**
 1. Resolved issues within the Users page that prevented administrators from modifying user information.
 2. Improved the implementation of role-based access control to ensure permissions were applied accurately according to user roles.
- **Companies Module Improvements**
 1. Enhanced the functionality of company profile pages to ensure accurate and consistent data presentation.
 2. Established proper relationships between companies and their corresponding sectors using unique identifiers (IDs), improving data retrieval and integrity.

- **Requests Module Development and Integration**

1. Designed and implemented a dedicated database table for managing requests.
2. Integrated employee-submitted requests with the administrative dashboard to enable centralized monitoring and management.

- **Stages Page Integration Enhancements**

1. Implemented synchronization between Arabic and English content when creating new stages.
2. Added dedicated Arabic fields for stage names and descriptions while maintaining consistency across both language versions.

- **License Management Database Setup**

1. Created and configured a new database table for storing and displaying license-related information.
2. Ensured seamless integration between the database and the user interface.

- **Market Rules Module Development**

1. Developed a dedicated database structure for managing market rules.
2. Implemented bilingual support for Arabic and English content.
3. Added dynamic language switching functionality within the same modal interface.

- **Notifications Module Optimization**

1. Improved notification handling by automatically removing completed actions from the notifications list.
2. Enhanced the accuracy and relevance of displayed notifications.

- **Overview Dashboard Enhancement**

1. Connected dashboard statistics directly to the database for real-time updates.
2. Added key performance indicators, including:
 - Total Companies
 - Total Requests
 - Pending Requests
 - Completed Requests

- **User Creation Process Fix**

1. Resolved an issue that prevented newly created users from appearing in the system due to incorrect role assignment configurations.
2. Ensured proper user registration and visibility after creation.

3. Skills and Knowledge Gained

- User role and permission management.
 - Multilingual system implementation and synchronization.
 - Dynamic form and modal development.
- 

- Troubleshooting, debugging, and issue resolution techniques.
-

4. Challenges Faced

Missing Database Tables for Certain System Modules

During the system development process, it was identified that some pages and modules were not fully integrated with the database due to the absence of dedicated tables for storing their data. This limitation affected the functionality of certain features and prevented data from being stored and retrieved properly, which impacted the overall system integration and performance.

5. Solutions and Improvements

The requirements of each module were analyzed to determine the necessary data structures. Missing database tables were then designed and created in accordance with the system architecture. These tables were subsequently connected to the APIs to ensure proper data exchange between the front-end and the database. As a result, system integration was improved, and the affected modules became more stable and fully functional.

6. Conclusion

The implemented enhancements significantly improved system stability, functionality, and operational efficiency. By resolving integration issues, strengthening database connectivity, and optimizing user management processes, the overall reliability of the platform was enhanced. Furthermore, these tasks provided valuable practical experience in full-stack development, database management, system integration, and problem-solving within a real-world software development environment.
